

+3.3V Low Power Full-Duplex RS-485 Transceivers with 10Mbps Data Rate

- Full-Duplex RS-485 and RS-422 Transceivers
- Operates from a single +3.3V Supply
- Interoperable with +5.0V logic
- Driver/Receiver Tri-state Enable Lines (**SP3491**)
- -7V to +12V Common-Mode Input Voltage Range
- +/-200mV Receiver Input Sensitivity
- Allows up to 32 transceivers on the serial bus
- Compatability with LTC490 and SN75179 (**SP3490**)
- Compatability with LTC491 and SN75180 (**SP3491**)

SP3490

DESCRIPTION

The **SP3490** and **SP3491** devices are +3.3V low power full-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the **Exar** SP490 and SP491 devices as well as popular industry standards. The **SP3490** and **SP3491** feature **Exar's** BiCMOS process, allowing low power operation without sacrificing performance. The **SP3490** and **SP3491** meet the electrical specifications of the RS-485 and RS-422 serial protocols up to 10Mbps under load. The **SP3491** is identical to the **SP3490** with the addition of driver and receiver tri-state enable lines.

SP3491

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC}	+6.0V
Input Voltages	
Logic.....	-0.3V to +6.0V
Drivers.....	-0.3V to +6.0V
Receivers.....	+/-14V

PIN FUNCTION

SP3490

Pin Function SP3490

Pin 1 - Vcc - Positive supply $+3.00V < V_{cc} < +3.60V$

Pin 2 - R - Receiver output

Pin 3 - D - Driver input

Pin 4 - GND - Ground connection

Pin 5 - Y - Non-inverting driver output

Pin 6 - Z - Inverting driver output

Pin 7 - B - Inverting receiver Input

Pin 8 - A - Non-inverting receiver input

SP3491

Pin Function SP3491

Pin 1 - NC - No connect

Pin 2 - R - Receiver output

Pin 3 - \overline{REB} - Receiver output enable active LOW

Pin 4 - DE - Driver output enable active HIGH

Pin 5 - D - Driver input

Pin 6 - GND - Ground connection

Pin 7 - GND - Ground connection

Pin 8 - NC - No connect

Pin 9 - Y - Non-inverting driver output

Pin 10 - Z - Inverting driver output

Pin 11 - B - Inverting receiver Input

Pin 12 - A - Non-Inverting receiver input

Pin 13 - NC - No connect

Pin 14 - Vcc - Positive supply $+3.00V < V_{cc} < +3.60V$

NOTE 1: The input pulse is supplied by a generator with the following characteristics:

PRR = 250kHz, 50% duty cycle, $t_r < 6.0ns$, $Z_o = 50\Omega$.

NOTE 2: C_L includes probe and stray capacitance.

The **SP3490** and **SP3491** are two members in the family of +3.3V low power full-duplex transceivers that meet the electrical specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the **Exar** SP490 and SP491 devices as well as popular industry standards. The **SP3490** and **SP3491** feature **Exar's** BiCMOS process allowing low power operation without sacrificing performance.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

The drivers for both the **SP3490** and **SP3491** have differential outputs. The typical voltage output swing with no load will be 0 volts to V_{CC} . With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels.

The driver of the **SP3491** has a driver enable control line which is active HIGH. A logic HIGH on DE (pin 4) of the **SP3491** will enable the differential driver outputs. A logic LOW on the DE(pin 4) will tri-state the driver outputs. The **SP3490** does not have a driver enable.

Receivers

The receivers of the **SP3490** and **SP3491** have differential inputs with an input sensitivity of $\pm 200\text{mV}$. Input impedance of the receivers is typically $15\text{k}\Omega$ ($12\text{k}\Omega$ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers for both the **SP3490** and **SP3491** are equipped with a fail-safe feature that guarantees the receiver output will be in a HIGH state when the input is left unconnected.

The receiver of the **SP3491** has a enable control line which is active LOW. A logic LOW on $\overline{\text{REB}}$ (pin 3) of the **SP3491** will enable the differential receiver. A logic HIGH on $\overline{\text{REB}}$ (pin 3) of the **SP3491** will tri-state the receiver.

REVISION HISTORY

DATE	REVISION	DESCRIPTION
10/11/02	--	Legacy Sipex Datasheet
06/08/10	1.0.0	Convert to Exar Format. Update ordering information as a result of discontinued Lead type package options per PDN 081126-01. Change revision to 1.0.0. Add new Figure 8 - Driver Short Circuit Current Limit Test Circuit
9/14/10	1.0.1	Correct package type for SP3491 options in ordering table from 8 pin NSOIC to 14 pin NSOIC
10/27/10	1.0.2	Add ESD protection levels of +/-2kV. Remove SP3490 Supply Current rating for DE = 0V (No driver enable for SP3490).
